New Electronic Warfare Signal Generation Solutions Reduce Costs

Simulate Early for Better EW Results

Learn about the available technological approaches for electronic warfare signal and environment simulation, and the latest progress in flexible, high-fidelity solutions. Innovations in digital-to-analog converters (DACs) bring direct digital synthesis (DDS) signal generation into EW applications through advances in bandwidth and signal quality. DDS solutions and other innovations in agile frequency and power control allow you to improve your design phase EW engineering accuracy and productivity. Get the EW Signal Generation application note today.
